

From pigeon mail to email to MMS... connectivity has come a long way.

And so have we.

Back in the 80's, we gave you 1200 bps.
We give you 1 Gigabit today.

We brought you TDM technology.
Today we bring you ETHERNET technology.

We connected before mobile came into existence.
We are connecting when mobile is in full bloom.

When only business houses were connected...we were involved.
When even rural areas are being connected...we are involved.

When you draw money from ATM ...think of us.
Think of us when you get your train ticket on your home computer.

When you transfer data to your branch office ...think of us.
Think of us when you video conference with your customer overseas.

We are the leaders in changing technology and will continue to lead.
Our indigenous manufacturing and Government of India recognised R & D setup will ensure that.

*But one thing that will never change is our commitment to our customers
and the trust they have reposed in us over the years.*

ISO 14001: 2004 (Environmental Management System) certification.
