

Isn't it time you switched to BigIron?

The role of data networks in today's world continues to expand and grow. Emerging needs such as application convergence, non-stop operation, scalability and IPv6-readiness place new demands on the network. Modern network solutions must score on performance, reliability, scalability, quality of service, security and total cost of ownership (TCO).

Brocade's chassis-based BigIron family of Layer 3 Backbone Switches for the campus, MAN and LAN environments delivers up to 5.12 Terabits per second of backplane switching capacity, dramatically reducing network bottlenecks with wire-speed IP routing. With this capacity, the BigIron RX Series scales to support 768 separate 10 Gigabit Ethernet ports in a single 7 foot rack. The entire BigIron family scales to easily handle several hundred non-blocking Gigabit Ethernet ports at a peak performance of up to 2.28 Billion packets per second-delivering greater performance than competitive switches and routers at a much lower price.

The BigIron series of switches are brought to you in India by MRO-TEK, the leaders in networking technology for more than 25 years, trusted by customers across industries for their customized solutions and committed support.

Key Features

- First 2.28 Billion packet per second switch that scales cost effectively from the Enterprise edge to the core
- Scalable hardware-based IP routing to 512,000 IP routes per line module
- High-availability design features redundant and hot-pluggable hardware, hitless software upgrades, and graceful BGP and OSPF restart
- Ultra low power cooling requirements, offering green data center networking

BIG IRON Layer 3 Switch
